IXIA NET TOOL OPTIMIZER® 5288

HIGH-DENSITY 100GE/40GE/10GE NETWORK MONITORING SWITCH

Advancements in virtualization and server technologies have made 10GE commonplace in large enterprise data centers, and the transition to 100GE or 40GE is not far behind. The Ixia Net Tool Optimizer® (NTO) 5288 provides up to 64 10GE ports, 16 40GE ports, or 4 100GE ports in a compact 2U form factor. The Ixia NTO 5288 aggregates data from multiple visibility points in a network and ensures the delivery of critical network traffic to the essential monitoring tools.

The Ixia NTO 5288 helps large enterprises monitor an increasing number of 1GE, 10GE, 40GE, and 100GE ports with their existing monitoring tools. By enhancing the performance of the network and security monitoring tools, companies can improve network performance, increase operation team productivity and reduce the risk of network outages.

The Ixia NTO 5288 is designed for high availability with redundant management ports, power supplies and fan trays. It's an ideal solution for enterprise data centers with increased bandwidth requirements due to higher processor density, virtualization and SANs.
